20µJ to 10J

Features

- · Sensors with diffuser for high energies and high energy densities
- Metallic coating for high repetition rates up to 10kHz
- High damage threshold
- Wide spectral range. Measure YAG and harmonics, 193nm, 248nm and many more
- Measure lasers with pulse widths up to 20ms

| Notes: (a) Calibration curve is verified and adjusted at specified wavelengths. | Specified wavelengths: 355nm, 532nm, 1064nm and 2100nm. | | | | | Specified wavelengths: 193nm, 248-266nm, 355nm, 532nm, 1064nm, 2100nm and 2940nm. | | | | | Specified wavelengths: 355nm, 532nm, 1064nm and 2100nm. | | | | | |
| At other wavelengths, there may be an additional error up to the value given. | Max additional error at other wavelengths not specified above: $\pm 2\%$. | | | | | | Max additional error at 193nm ±4%. Max additional error at other wavelengths not specified above: ±2% 193nm reading may need 1min irradiation to stabilize. | | | | | Max additional error at other wavelengths not specified above: $\pm 2\%.$ | | | | |
| Notes: (b) | For wavelengths >2.1µm, derate to 40% of above values. For beam size ≤5mm. For 10mm beam, derate to 40% of above value. | | | | | | . For wavelengths >2.1µm, derate to 40% of above values. | | | | s. For wavelengths below 600nm, derate to 60% of given values. For beam size ≤4mm. For 8mm beam, derate to 50% of above values. | | | | | |

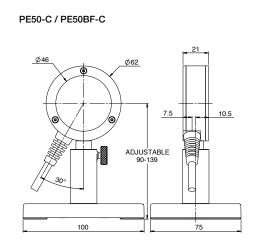

For <10Uns and wavelengths <24/unn, derate by 50%. above values. Notes: (c) With the "user threshold" setting set to minimum. For other settings, the spec is for >10% of full scale or greater than twice the "user threshold", whichever is greater. The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar, For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 105). The adapter can introduce up to 1% additional measurement error. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments. For further information, see the FAQs on our Website. Notes: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter, only 2 out of 5 pulse widths settings are available; for the PE50-DIF-C and PE50U-DIFH-C models the 2µs (displayed as "30µs") and 1ms settings, and for the PE25BF-DIF-C model the 1ms and 10ms settings.
